

Court Report — Project Brief

What It Is

A site that classifies basketball shoes and associates real user-written reviews from r/BBallShoes with each shoe. Reviews are condensed into easy-to-read summaries with links back to the original Reddit post.

Current State (v0.1)

- Built as a React JSX artifact (dark editorial aesthetic, Playfair Display + JetBrains Mono + Bebas Neue fonts)
- 3 shoes seeded: Nike LeBron 21, 361 Joker 1, Nike GT Cut Cross
- Performance breakdown bars across 8 categories (cushioning, traction, support, fit, breathability, durability, court feel, value)
- Review quality badges: "DETAILED REVIEW" vs "SHORT REVIEW — LESS WEIGHT"
- Expandable full review text
- Brand filtering

What's Missing / Next Steps

1. Condensed Review Summaries

Each review card should show a **3-4 line condensed summary** of the full review in plain language, not the full wall of text. Think of it like a TL;DR that captures:

- Sizing advice (TTS, half up, half down)
- Best trait (e.g. "cushioning is elite")
- Worst trait (e.g. "breathability is poor")
- Who it's best for (e.g. "guards who want impact protection")

2. Link to Original Reddit Post

Each review should display a clickable link to the original r/BBallShoes post so users can

read the full thread.

3. Reddit Scraping (Last 14 Days)

Scour r/BBallShoes for posts from the last 14 days. For each post:

- Determine if it's a shoe review (not a question, meme, or short comment)
- Filter by quality: minimum ~150-200 words to qualify as a real review
- Identify which shoe the review is about
- Extract key details: sizing, comfort, traction, court feel, pros/cons
- Generate a condensed 3-4 line summary
- Store the Reddit post URL

Example of a GOOD review (include):

- <https://www.reddit.com/r/BBallShoes/s/so05V0KJTU> — LeBron 21, discusses sizing, comfort, heel slippage, court feel in depth
- <https://www.reddit.com/r/BBallShoes/s/rHVUKrLkuy> — Nikola Jokic shoes, detailed performance breakdown

Example of a BAD review (exclude):

- <https://www.reddit.com/r/BBallShoes/s/CdHoQTT0hR> — Nike GT Cut Cross, too short, not enough substance

4. Data Structure Per Review

```
{
  "shoe": "Nike LeBron 21",
  "brand": "Nike",
  "redditUrl": "https://www.reddit.com/r/BBallShoes/comments/...",
  "author": "u/username",
  "date": "2025-04-01",
  "summary": "TTS with a break-in period. Cushioning is elite - Zoom Turbo forefo",
  "playstyle": "Guard / Slasher",
  "courtType": "Indoor",
  "sizingNote": "True to size",
  "verdict": "Elite",
  "fullText": "...",
  "ratings": {
    "cushioning": 9.5,
    "traction": 9.0,
```

```
    "support": 9.0,  
    "fit": 8.0,  
    "breathability": 6.0,  
    "courtFeel": 7.5  
  }  
}
```

5. Review Card Layout (Updated)

```
| u/hoopcite_guard · r/BBallShoes · 2025-03-28 |  
| [DETAILED REVIEW — HIGH QUALITY] |  
| |  
| Guard / Slasher · 185 lbs · Indoor |  
| Sizing: True to size, snug heel |  
| |  
| TTS with a break-in period. Cushioning is |  
| elite — bouncy forefoot, thick heel Zoom. |  
| Traction top-tier on clean courts but picks |  
| up dust. Breathability is the weak point. |  
| |  
| VERDICT: ELITE |  
| |

Design Direction

- Dark background (#0A0A0C), orange/amber accents (#FF6B35, #FF9F1C), green for high scores (#00FF88)
- Editorial/magazine feel — not a generic dashboard
- Mobile-first but works on desktop (two-column layout on wide screens)
- Film grain texture overlay, ambient glow effects

Tech

- React JSX artifact (single file)
- No backend needed — shoe + review data lives in the component as JSON

- Future: could export to a standalone Vite app or GitHub Pages deployment
